Table of Contents

Preface ..... **ix**

1. What is the Kinect? **1**
How does it work? Where did it come from? 1
What Does the Kinect Do? 1
What's Inside? How Does it Work? 2
Who Made the Kinect? 7
Kinect Artists 11
Kyle McDonald 12
Robert Hodgin 15
Elliot Woods 19
blablabLAB 24
Nicolas Burrus 28
Oliver Kreylos 31
Alejandro Crawford 35
Josh Blake 39
Adafruit 43

2. Working With the Depth Image **47**
Images and Pixels 47
Project 1: Installing the SimpleOpenNI Processing Library 49
Installing OpenNI on OS X 50
Installing OpenNI on Windows 52
Installing OpenNI on Linux 53
Installing the Processing Library 53
Project 2: Your First Kinect Program 57
Understanding the Code 64
Project 3: Looking at a Pixel 68
Color Pixels 70
Depth Pixels 72
Converting to Real World Distances 74

Project 4: A Wireless Tape Measure 76
Higher Resolution Depth Data 81
Project 5: Tracking the Nearest Object 84
Finding the Closest Pixel 85
Using Variable Scope 89
Projects 92
Project 6: Invisible Pencil 93
Project 7: Minority Report Photos 104
Basic Version: One Image 106
Advanced Version: Multiple Images and Scale 110
Exercises 118

3. Working With Point Clouds 119
What You'll Learn in This Chapter 120
Welcome to the Third Dimension 121
Drawing Our First Point Cloud 124
Making the Point Cloud Move 130
Viewing the Point Cloud in Color 138
Making the Point Cloud Interactive 142
Projects 152
Project 8: Air Drum Kit 153
Adding Audio with Minim 154
Connecting our First Air Drum 156
Filling Out Our Air Drum Kit 160
Project 9: Virtual Kinect 172
Displaying a 3D Object 173
3D Model in the Point Cloud 183
Variation: Visualizing the Kinect's Line of Sight 187
Camera Control with PeasyCam 189
Conclusion 199

4. Working with the Skeleton Data 201
A Note about Calibration 208
Stages in the Calibration Process 209
User Detection 211
Accessing Joint Positions 220
Skeleton Anatomy Lesson 227
Measuring the Distance Between Two Joints 237
Transferring Orientation in 3D 249
Orientation from a Single Joint 250
Orientation from Any Vector with Axis-Angle 260
Background Removal, User Pixels, and the Scene Map 268
Tracking without Calibration: Hand Tracking and Center of Mass 277

Hand Tracking 277
Center of Mass 283
Projects 287
Project 10: Exercise Measurement 288
The SkeletonRecorder Class 298
Exercises 303
Project 11: Stayin' Alive: Dance Move Triggers MP3 303
Describing a pose as joint relationships 305
Basic Version 306
Advanced Version 311
The SkeletonPoser and PoseRule Classes 319
Exercises 324
Conclusion 324

5. Scanning for Fabrication 327
Introduction 327
Scan and Print: Rapid Prototyping Objects 328
From a Point Cloud to an Object 330
Outline of This Chapter 332
Intro to Modelbuilder 332
Intro to MeshLab 340
Your First Visit to MeshLab 341
Making a Mesh from the Kinect Data 344
Looking at Our First Scan 349
Cleaning up the Mesh 351
Looking at Our Corrected Model 360
Prepping for Printing 363
Reduce Polygons in MeshLab 363
Printing our Model on a MakerBot 367
Installing ReplicatorG and Connecting it to Your Bot 368
Calibrating your MakerBot 370
Printing our Scan 374
Sending our Model to Shapeways 376
Comparing Prints 377

6. Using the Kinect for Robotics 379
Forward Kinematics 381
Calculating the Angles Between Joints 381
Getting Started with Arduino: The Brain of our Robot Arm 388
Acquiring the Arduino and the Servos 389
Plugging in the Servos 390
Downloading the Arduino Development Environment 391
Programming the Arduino 392

Testing our Arduino Program: Serial in Processing 395
Building our robot arm 398
Putting It All Together: Connecting our robot arm to our Processing sketch 402
Inverse Kinematics 403
Inverse Kinematics Calculations without the Kinect 404
Controlling our Robot Arm with Inverse Kinematics 409
Updating Our Hardware 410
Updating Our Code 411
Conclusion 415

7. Conclusion: What's Next? 417
Beyond Processing 417
Ideas for Projects 417
Learn More about 3D Graphics 417

8. Appendix 419
SimpleOpenNI Cheat Sheet 419
Chapter 2 422
Chapter 4 424
Chapter 6 426
